JULYENNE PATRICK W. MEDINA

OPERATIONS | QUALITY ASSURANCE | BUSINESS ANALYSIS

Professional Portfolio • Selected experience and illustrative work samples

A process-focused professional with experience in case analysis, quality review, IT helpdesk support, technical support, sales and marketing, and automotive parts-center administration.

PHILIPPINES • Open to remote and international opportunities

01 | Professional Profile

An overview of experience and working style for operations-focused roles.

I am an operations and support professional with experience in case analysis, quality checks, technical troubleshooting, customer communication, documentation, and sales performance tracking. My background includes roles at Sutherland Global Services and Concentrix, freelance sales and marketing work, and automotive parts-center administrative support during my OJT at Foton Marilao.

I work best where accuracy, clear procedures, practical problem-solving, and reliable follow-through matter. I aim to help teams keep work organized, identify issues early, document findings clearly, and improve day-to-day processes.

Target roles: Operations Analyst • Quality Assurance Analyst • Case Analyst • Business Operations Analyst • Reporting Analyst • Sales Operations Analyst

Core strengths

- Case review, quality checking, and policy/process adherence
- Issue investigation, root-cause thinking, and escalation coordination
- Accurate documentation, records management, and clear written updates
- Technical troubleshooting and user support
- Sales conversations, objection handling, and performance awareness
- Willingness to learn new systems and follow structured workflows

02 | Experience Snapshot

Confirm titles and dates against your resume before sending this portfolio.

Sutherland Global Services

Case Analyst | Nov 2021 – Feb 2024

- Reviewed cases against internal policies and quality standards.
- Documented findings, identified errors or gaps, and supported consistent decision-making.
- Tracked results and used spreadsheets/reporting to organize information.
- Coordinated with relevant teams to clarify issues and support resolution.

Sutherland Global Services

IT Helpdesk Support | Feb 2020 – Nov 2021

- Assisted users with computer, software, and system-related issues.
- Used troubleshooting steps, documented support requests, and escalated issues when needed.
- Provided clear guidance while following support processes.

Concentrix

Technical Support Representative | Oct 2018 – Dec 2019

- Supported customers for a US telecommunications and entertainment service.
- Helped investigate technical or service issues, explained troubleshooting steps, and documented interactions.

Freelance Sales & Marketing

Online Sales / Marketing Support | December 2020 to September 2026

- Managed customer conversations and sales opportunities across online channels.
- Handled questions and objections, monitored sales performance, and worked toward targets.

Foton Marilao

OJT – Parts Center / Administrative Support | Jun–Sep 2018

- Supported parts-center administration and record keeping.
- Helped maintain inventory, delivery, and parts movement/availability records.
- Organized physical and electronic documents to support daily operations.

Training: TESDA Bookkeeping NC III (issued February 2026). Education: BulSU ETEEAP BSBA Marketing Management in progress; do not list as completed until awarded.

03 | Work Sample: Case Analysis & Quality Assurance

Illustrative example only — fictional case details and figures, not a former employer's records.

Scenario: A reviewer receives a batch of 50 completed service cases and checks whether notes, resolution codes, and required process steps are complete.

Sample review checklist

Check area	What to verify	Why it matters
Documentation	Required notes and evidence are present	Supports traceability and handover
Policy adherence	Required steps followed in order	Improves consistency and compliance
Resolution accuracy	Outcome and closure code match	Reduces rework and incorrect reporting
Escalation	Complex cases routed to the right team	Helps prevent avoidable delays

Illustrative findings

In this fictional sample, 43 of 50 cases pass all checks and 7 need follow-up: missing documentation (4), incorrect closure coding (2), and missed escalation (1). These are example counts, not actual performance results.

Recommended action

- Return affected cases for correction and document the specific gap.
- Share a short reminder or job aid for the most common error.
- Review a follow-up sample to check whether the issue repeats.
- Track error categories and raise recurring process problems to the team lead.

Skills demonstrated: structured review, attention to detail, evidence-based decisions, documentation, trend identification, and corrective-action follow-up.

04 | Work Sample: IT Helpdesk & Technical Support

Illustrative ticket example using fictional details.

Ticket ID: DEMO-1042 **Priority:** Medium **Category:** Microsoft 365 / Access

Reported issue: A user cannot open a shared work file and receives an access-denied message.

Troubleshooting workflow

1. Confirm the user, file location, exact error, and whether others are affected.
2. Check network access and confirm the user is signed in to the correct work account.
3. Verify whether file permissions changed and whether the user belongs to the required group.
4. Use only approved steps; do not bypass access controls or request passwords.
5. If administrator access is needed, escalate with the error, checks completed, impact, and timestamps.
6. Document the outcome and confirm access after the approved fix.

Sample ticket note

“User reports access denied when opening a shared file. Confirmed user can access other Microsoft 365 resources. Checked sign-in and network status; issue appears limited to the specific shared folder. No permission changes made. Escalated to the authorized administrator to verify group access. User informed of next step; ticket remains open pending confirmation.”

Skills demonstrated: structured troubleshooting, safe handling of access issues, clear notes, escalation, and user communication.

05 | Work Sample: Sales & Performance Reporting

Fictional dataset created to demonstrate reporting without exposing customer or employer information.

Example weekly performance summary

Day	Chats handled	Sales (USD)	Conversion
Monday	42	$780	19%
Tuesday	45	$920	22%
Wednesday	39	$710	18%
Thursday	48	$1,050	25%
Friday	46	$940	23%
Total / average	220	$4,400	21.4% avg.

Example insights

- Thursday had the highest sales in this sample at $1,050.
- Wednesday had the lowest sales and conversion rate, so it may be useful to review conversation types and common objections.
- Compare results by day, campaign, or channel before deciding on a change; one day does not prove the cause.
- Use consistent definitions for chats, sales, and conversion so comparisons are fair.

Example spreadsheet formulas

Metric	Example formula (Excel)
Total sales	=SUM(C2:C6)
Total chats	=SUM(B2:B6)
Average daily sales	=AVERAGE(C2:C6)
Conversion rate	=Sales / Eligible Chats

06 | Work Sample: Excel Dashboard & Data Analysis

Suggested dashboard design for an operations or quality team.

A practical Excel dashboard could use a cleaned data table, pivot tables, and formulas to summarize volume, quality, backlog, and performance.

KPI	Definition	Example display
Cases reviewed	Count of unique reviewed cases	KPI card + weekly trend
Pass rate	Cases passing all checks ÷ cases reviewed	Percentage + target line
Rework rate	Cases returned for correction ÷ cases reviewed	Weekly line chart
Open backlog	Items awaiting action at period end	KPI card + aging bands
Average resolution time	Total elapsed time ÷ resolved cases	Trend and category split

Data quality steps

- Remove duplicates and check blank required fields.
- Standardize dates, status labels, category names, and ID formats.
- Check totals against source data before sharing results.
- Label reporting periods, metric definitions, and assumptions.
- Use fictional or anonymized data in portfolio examples.

This is a proposed dashboard structure, not a claim that a live dashboard was built at a previous employer. Add an actual workbook or screenshot after creating one.

07 | Work Sample: Process Improvement & Workflow Documentation

Example of a simple workflow improvement proposal.

Fictional problem: Work items are returned because key information is missing, creating repeat handling and delays.

Step	Current risk	Suggested control
Receive request	Required details missing	Use a standard intake checklist
Review details	Reviewers check different items	Use a shared review checklist
Resolve / route	Unclear ownership	Define routing rules and escalation owner
Close item	Closure notes incomplete	Require resolution notes and final status
Monitor trends	Repeat issues not visible	Review weekly error categories

How success could be measured

Track missing-information rate, rework rate, average completion time, and escalations before and after a change. Compare similar time periods and document other factors that may affect results. Do not report an improvement percentage until it has been measured.

08 | Tools, Training & Working Approach

List only tools and skills you can confidently discuss in an interview.

Tools and systems

- Microsoft Excel — organizing data, tracking results, and basic reporting; list specific functions only if you can demonstrate them.
- Microsoft Dynamics 365 — previous exposure; describe the modules and tasks actually used.
- Slack and Discord — team communication and coordination.
- Case/ticket documentation systems — describe the actual tools used in your previous roles.

Training and education

- **TESDA Bookkeeping NC III** — completed; issued February 2026.
- **Bulacan State University ETEEAP, BSBA Marketing Management** — in progress; not presented as a completed degree.

Working approach

- Calm and respectful when receiving feedback.
- Open to reviewing a decision when new evidence or another perspective is provided.
- Careful with records, process steps, and confidential information.
- Focused on resolving issues and documenting clear next actions.
- Willing to learn new tools and take on broader operational responsibilities.
